

# 5 Novel Stoday Plus Techniques

## Pomodoro +

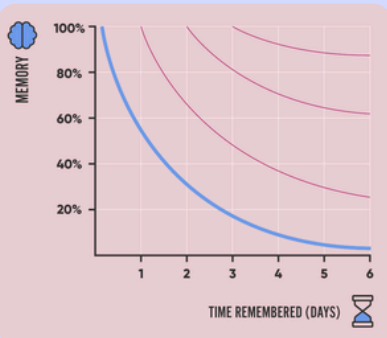

Pomodoro: 25 min work block + 5 min break

- Scientifically proven to boost productivity and enhance performance

Pomodoro +: 45-60 min work block (+ 5 min break)

- More time per work block, deeper work done and less blocks to do
- One-block-only can still be productive - less effort but improved productivity

## 3-day Retention

- Research shows that memory retention plummets after first 3 days
- Requires revision before the 3-day 'dead' window
- If not, information will be 'erased' from memory

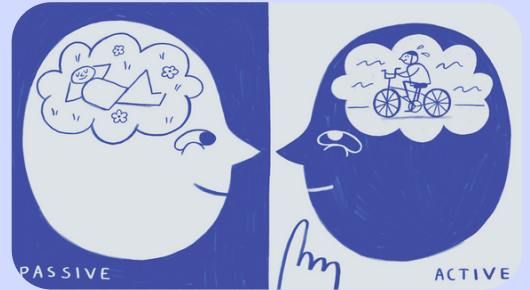

## Feynman Technique

- Nobel-prized physicist has a famous saying that: "if you can't teach a topic to a 12-year-old, then you don't understand the topic well enough"

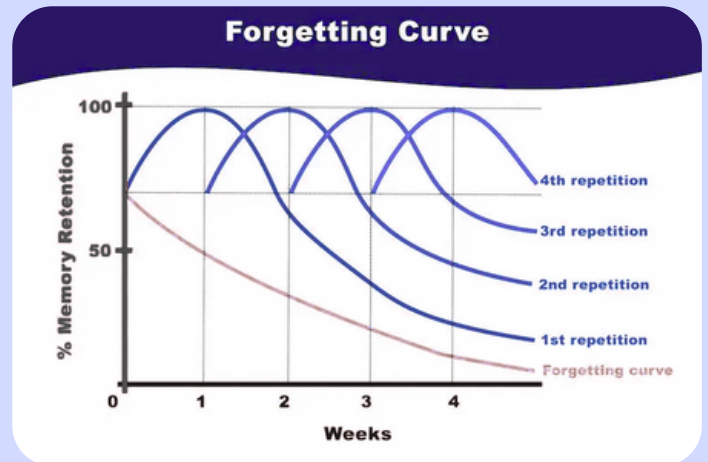

- Write down understanding in simple words → triggers active reasoning from the brain
- Quick, simple and most effective strategy

## Active Recall

- Passive: re-reading, copying notes, listening to lectures ✗
- Active: doing questions, writing notes from memory ✓
- Flashcards are old-school and time-consuming - AI-created MCQs and SAQs now superior!
- Statistics-backed - Active > Passive (by 300% retention rate)

## Spaced Repetition

- 3-day retention when zoom-ed out (long-term)
- Best if aiming for perfection (>90%)
- Needs a well-structured system
- If applied well can achieve 'unbelievable' results

## Top Mistakes Students Make ✗

1. Over-highlighting and passive reading
2. Revising only once
3. Never test memory → no retrieval practice

"You don't need to study harder. You need to study smarter — with systems that are backed by science."
